Austin Media Wall Suite for Hestia electric fires
Installation Guide

The Austin Media Wall Suite is crafted from high-quality MDF and consists of two primary sections. Please follow the steps below to ensure correct and safe installation.

Step 1: Unpacking and Layout

Carefully unpack all components and lay them out on a clean, soft surface to prevent damage. Ensure all panels, fixings, and the electric fire unit are present before beginning installation.

Step 2: Positioning the Base Panel

Place the base panel (bottom section) against the desired wall. Use a spirit level to ensure it is completely level before proceeding.

Step 3: Installing the Spacers

Insert the provided wooden spacers into the top of the base unit. These will support the Hestia electric fire and ensure it is seated securely.

Step 4: Installing the Electric Fire

Carefully slide the Hestia electric fire unit into the central cavity. Ensure that the power cable is accessible and the front of the unit is flush with the media wall panels.

Step 5: Attaching the Lower Side Panels

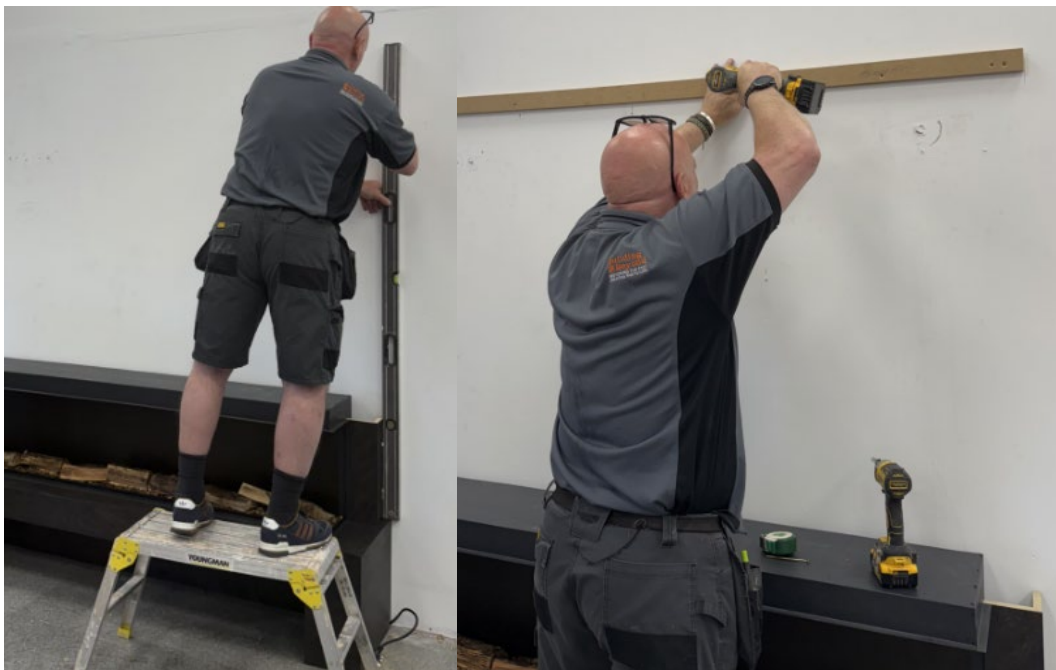

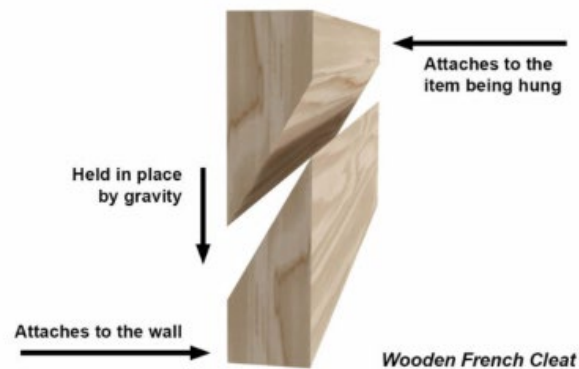

Secure the lower vertical side panels to the base unit. Use a set square or spirit level to confirm they are flush and perpendicular.

Step 6: Securing the Unit to the Wall

Install the top bracket into the wall using appropriate wall plugs and screws. This step is critical for stability and safety, particularly in homes with children or pets.

Important: Ensure the top bracket is mounted in the correct orientation to properly engage with the French cleat system.

Step 7: Installing the Top Section

With assistance, lift the top section into position. It should slide into place and rest securely on the French cleat previously fixed to the wall.

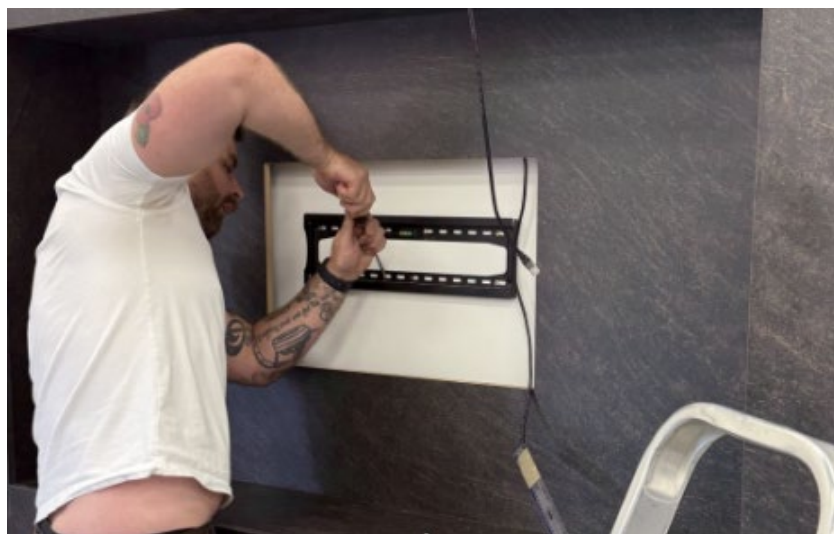

Step 8: Installing the Glass Panels

Carefully slide the three glass panels into place on the front of the Hestia Electric Fire.

Step 9: Mounting Your TV Bracket

You may now mount your TV wall bracket onto the wall above the media unit. Ensure it is securely installed according to the manufacturer's instructions.
